BMW VANOS Pressure Test Kit S54 S85

CAD \$550.97

Designed specifically to read live BMW VANOS (variable valve timing system) pressures. This pressure test kit will help you diagnose your vehicle's issues more accurately. Our kit is designed specifically for the high pressure requirements of the VANOS system (90 bar or 1300 PSI and up). This kit has been built to service both the S54 and S85 engines found in the M3, M5 and M6 models. It can be used to service and test both the right and left BMW VANOS pressure hoses. With our design you can save time during your diagnosis by not having to remove the valve cover to check for broken bolts, damaged crush washers or loose components. The kit includes:

- High pressure hose kit that can withstand pressures of up to 630 bar or 9100psi
- High quality fittings and banjo connections
- Liquid filled gauge, which provides cushioning to reduce pointer flutter and internal damage
- Accuracy of $\pm 1\%$

This kit is designed and produced in-house. We have taken the time to ensure you will get the best value for your money with the highest quality components. If you have any questions or concerns please do not hesitate to ask! Related Part Numbers:
