## E46 M3 SMG Upgraded Aluminum Reservoir Tank 21532229715

**USD \$315.76**

We are now offering an upgraded aluminum reservoir tank for the BMW E46 M3 SMG II pump. We designed our aluminum reservoir to replace the stock plastic tank, which is prone to cracking and leaking over time. This new tank, crafted from high-quality aluminum, offers superior durability and resistance to heat and corrosion.

Our engineers expertly designed the tank to fit seamlessly into the OEM location without any modifications, making it a direct replacement for the factory unit. The following features are in the design:

- Enlarged capacity ensuring that hydraulic fluid remains at a consistent level even during hard driving or track use
- Power coated for added protection against the elements as well as a sleek and stylish appearance
- Cooling fins to allow for heat dissipation
- Drain plug for fluid to be flushed periodically without taking whole system out of vehicle

Included in the kit is:

- New aluminum oil tank/reservoir
- New gasket/seal
- Mounting hardware

With its superior construction, increased capacity, and direct fitment, the upgraded aluminum reservoir tank is an excellent choice for any E46 M3 owner looking to upgrade their BMW E46 M3 SMG pump system and improve the overall reliability and performance of their vehicle.
