Fiat 500 Pump 71769627 71771095

USD \$1,037.97

This item is a new Fiat 500 pump. This hydraulic pump is used in Fiat vehicles with the dual clutch transmission (DCT). The new DCT pump is the original pump that is used by the OEM and has the exact same original specifications and performance standards.

The pump is considered a regular wear item. If the vehicle does not have the correct pressure it will present transmission codes pointing the user to the clutch. We suggest changing this item first before diagnosing the rest of the system as you require system minimum pressure.
