Ram Promaster Position Sensor 68133133AA

USD \$240.37

This item is a new OEM Ram Promaster position sensor.

Repair your Ram ProMaster automated transmission with our premium new OEM sensor engineered to exact specifications. This kit addresses a critical component prone to wear and tear. Replacing it will ensure seamless operation and minimizing the risk of system failures.

This is an essential wear item. The position sensor is a vital component in the automated transmission system. Our OEM kit provides a reliable replacement solution, ensuring optimal functionality and preventing potential system failures.

Don't wait until shifting issues arise—invest in the longevity and reliability of your Ram ProMaster M40MTA with our new position sensor. Trust in our quality craftsmanship and OEM precision to keep your vehicle operating at its best, mile after exhilarating mile.

The failure of position sensor will cause the system to fail at different shifting scenarios and will trigger error codes that might not directly point to the actuator.
