Ram ProMaster Transmission Speed Sensor 68146605AA 68095151AA

CAD \$155.85

This is a new Ram ProMaster Transmission Speed Sensor.

The function of this sensor is to measure the rotational velocity of the transmission input shaft and transmit that information to the control unit. This speed signal is crucial for the control unit to effectively manage the transmission system. By accurately monitoring the shaft speeds, the control unit can precisely adjust the timing of gear engagement and disengagement, ensuring smooth and efficient operation of the transmission.
