## SMG III Gear Pump Inner Seal Kit

**CAD \$125.94**

**NEW** replacement seals for BMW SMG III gear pump. Replaces worn and/or cracked seals.

The SMG III Gear Pump Inner Seal Kit is a set of seals designed for the Sequential Manual Gearbox (SMG) system in BMW vehicles with the SMG III transmission. The kit includes a set of high-quality seals that are designed to fit precisely within the gear pump to prevent fluid leaks and ensure the proper functioning of the SMG system.

The seals included in the kit are made from durable materials that are resistant to heat, oil, and other environmental factors that can cause premature wear and failure. The kit typically includes seals for the input shaft, the output shaft, and the oil pump, as well as any other seals that may be necessary for a complete overhaul of the gear pump.

The SMG III Gear Pump Inner Seal Kit is an essential component for maintaining the reliability and performance of the SMG system. Over time, the seals in the gear pump can wear out or become damaged, leading to leaks and a loss of hydraulic pressure. By replacing the seals with the high-quality components included in this kit, the gear pump can be restored to like-new condition, ensuring proper SMG system function and avoiding more costly repairs down the road.

Installation of the SMG III Gear Pump Inner Seal Kit typically requires specialized tools and expertise, and it is recommended that it be performed by a qualified mechanic or technician familiar with the SMG system.

This kit includes all seals in lower high pressure gear pump as seen below:

- 2 x inner pump gear seals
- 1 x high pressure output o-ring
- 1 x housing snout o-ring
